

5g micro base station power supply lightning protection

Overview

Why should a 5G base station be protected?

In addition to potential damage originating on the power line, the base stations must be sturdy to environmental electrical hazards such as lightning and electrostatic discharge (ESD) strikes. Design engineers need to protect their 5G base stations from these electrical hazards to prevent damage to the bases station and avoid critical downtime.

What is a 5G base station?

A 5G network base-station connects other wireless devices to a central hub. A look at 5G base-station architecture includes various equipment, such as a 5G base station power amplifier, which converts signals from RF antennas to BUU cabinets (baseband unit in wireless stations).

How does a macro base station work?

In a macro base station application, input protection, rectifier, and filter convert the AC input to DC. Since it interfaces with the AC line, it needs the full suite of overcurrent and overvoltage transient protection.

5g micro base station power supply lightning protection

Lightning and Surge Protection for Cell Sites & 5G Macro Base Stations

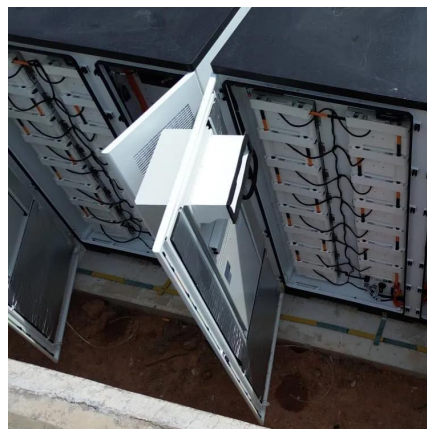

The external lightning protection system consists of an air termination system, down conductor and earth-termination system. The internal lightning protection system encompasses lightning ...
