

# **Bangladesh Cabinet Energy Storage System Project**

## Overview

---

According to the request for proposals issued on July 30, the program calls for 16 standalone projects, each rated at 10MW/40MWh, totaling 160MW/640MWh of four-hour storage capacity. Selected developers will design, build, own, and operate the systems under 15-year agreements. What can be done about grid connected energy storage in Bangla-Desh?

Limited experience and knowledge of grid connected energy storage in Bangladesh. Early-stage pilot programmes such as the planned 2MW grid connected BESS funded by the Asian Development Bank (ADB) would further support capacity building and knowledge transfer. 3.3.

Can energy storage be used in Bangladesh?

Concluded in May 2023, the assignment assessed available energy storage technologies, evaluated the role of energy storage in the current grid conditions, identified potential storage locations, analysed energy storage requirements under variable renewable energy (VRE) integration, and developed a roadmap for energy storage in Bangladesh.

Will European Union fund energy storage in Bangladesh?

Bangladesh government and potential investors into energy storage were handed European Union-funded roadmap for the technology's development.

How does the power sector support transport in Bangla-Desh?

The power sector continues to support the ongoing electrification of transport in Bangla-desh, through various initiatives undertaken by distribution companies and the roll-out of an EV charging tariff.

Can distribution companies provide electricity solutions for displaced communities in Bangladesh?

There are no service obligations for distribution companies to provide electricity solutions for displaced communities in Bangladesh. Distribution

companies and non-governmental organisations (NGOs) (in the absence of service area obligations) would be key institutional stakeholders for the deployment of this application.

What is the financial model for EV-BESS deployment in Bangladesh?

The current financial model for EV-BESS deployment in Bangladesh relies on a service payment to EV-BESS projects. This payment model does not create bankable projects due to the lack of any long-term fixed revenue streams. However, additional commercial revenue streams may be leveraged to improve commercial viability of these projects.
