

# **Buy solar panels on-site energy**

## Overview

---

Where can I buy solar panels?

Like the national companies, installers on EnergySage provide turnkey quotes that include equipment, financing, and installation. If you want to purchase equipment for a DIY project or install a small, portable off-grid system, wholesale resellers or Amazon may be the most suitable option. What is the best place to buy solar panels for you?

.

Where can I buy solar equipment?

Like wholesale resellers, Amazon is another way to purchase solar equipment directly. Many people commonly purchase solar panel kits from Amazon that include the majority of equipment necessary for getting a solar panel system up and running (i.e., wiring, solar panels, the inverter, etc.).

Where can I buy a solar panel kit?

Many people commonly purchase solar panel kits from Amazon that include the majority of equipment necessary for getting a solar panel system up and running (i.e., wiring, solar panels, the inverter, etc.). Most solar panel kits are best suited for smaller applications, such as an RV or boat instead of a home.

Are solar panels a good option for a home?

Most solar panels kits will not generate enough power to cover the electricity bills for a home. However, they are a great option if you are looking to generate power for limited use and/or short amounts of time, like for an RV. Solar panel kits are great for supplying power to places with no access to electricity, at a reasonable price.

Should you buy a solar home kit?

More expensive models have more solar panels. These relatively inexpensive

kits can save you significant amounts of money on your energy bill. A solar home kit is a great investment to supply your home with clean, renewable power. SunWatts can help you find and install the perfect solar kit for your home.

How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.
