

Communication base station EMS cabinet specifications

Overview

What is a communications equipment system?

Some communications equipment systems include detectors and alarms that transmit to centralized control centers within the system itself. High-rise buildings often utilize a second dedicated facility alarm and can be included as part of a central alarm system connected to the local fire department.

What features are included with the mts4 basestation equipment?

Full redundancy of site controller and base radio subsystems including support for automatic Main Control Channel switching. With the MTS4, there is no need to worry about theft or vandalism. The basestation equipment includes the latest security features for total peace of mind:.

What is a code-compliant two-way communication system for rescue assistance?

A code-compliant two-way communication system for rescue assistance requires a central control point to manage emergency assistance calls from call boxes. Requires a single analog (POTS, PBX, or central office phone line) or digital phone line. If used on an IP or cellular network, you must purchase an additional interface device from RATH.

What are the shipping requirements for a self-contained radio site?

A "shipping container" that has been outfitted as a self-contained radio site must meet strict dimensional requirements, including protrusions such as HVAC, RF entry assemblies, or AC entrances, and must conform to applicable shipping requirements.

What is a communications enclosure & ancillary system?

An enclosure that houses communications equipment and ancillary systems only, designed such that equipment contained within can be accessed without the need for personnel to enter the cabinet. An enclosure is typically pre-wired

and its equipment is pre-installed. Example: (See Figure 3-2 and Figure 3-4.) An unmanned, weather-tight enclosure.

What can a base station do if a link fails?

Redundant E1 and Ethernet ports can be activated in the event of link failure, ensuring continuous connectivity. Local Site Trunking – in the event of site link failure, the base station is able to operate independent of the mobile switching office, maintaining secure talkgroup communications throughout.
