

Communication base station EMS networking solution

Overview

What is an in-building emergency responder Communications Enhancement System (Erces)?

An In-Building Emergency Responder Communications Enhancement System (ERCES) is a wireless communications system used by first responder and emergency services personnel, such as police, fire, emergency medical, homeland security, and disaster response agencies.

How EMS manage a transmission network?

1) Movement of user terminals and guarantee of communication quality To manage a transmission network or core network, the EMS can be directly connected with the constituent network devices to monitor and control the devices and thus grasp and maintain the quality of the network.

Why is wireless connectivity important for EMS technicians & paramedics?

For EMS technicians and paramedics on the frontlines, wireless connectivity is a lifeline. They rely on fast and always-on access to critical systems and information to perform their mission, whether in a vehicle or on-scene.

Why do emergency responders need in-building wireless communications?

The need for in-building wireless communications for Emergency Responders resulted in the development of national model codes by the National Fire Protection Association (NFPA) and the International Code Council (ICC) as early as 2009.

Can EMS organizations afford network pros?

EMS organizations can't always afford network pros. Easy-to-use cloud management lets network novices centrally manage an Ericsson Cradlepoint network like a pro — reducing garage-time for ambulances. Accurate location data is essential — lives often depend on it.

Are cellular communications incorporated into emergency response?

In late 2017, the Safer Buildings Coalition surveyed the International Association of Fire Chiefs (IAFC) to get a sense of how cellular communications have been incorporated into emergency response. Here are the findings:

Communication base station EMS networking solution
