

Cooperative agent for French rooftop photovoltaic panels

Overview

Can photovoltaic solar panels be installed on a roof in France?

Many individuals in France have already chosen to install photovoltaic solar panels on their roof or in their garden. To succeed in your project, do not hesitate to request several quotes from qualified professionals and compare offers to find the solution best suited to your needs.

Should you invest in photovoltaic solar panels in France?

Invest in photovoltaic solar panels in France is an important decision for many individuals. With this technology, you can produce green electricity, save money on your energy bills and even generate additional income. Find out everything you need to know about solar panels in France to make the best possible choice.

Is France a good country for rooftop solar?

France remains one of the top performing countries when it comes to the development of Rooftop solar policy and practices, but deliverables still need to be achieved. France's photovoltaic (PV) policies are developed within the National Low Carbon Strategy and the Energy Programme Decree.

Will France support a 3.7gw rooftop solar project?

Image: Tenergie. The European Commission (EC) has given the green light to a French aid scheme that is expected to support the development of 3.7GW of rooftop solar. With a budget of around €5.7 billion (US\$6.8 billion), the measure will run until 2026 and be open to operators of PV installations that have a capacity of up to 500kW.

What are France's photovoltaic policies?

France's photovoltaic (PV) policies are developed within the National Low Carbon Strategy and the Energy Programme Decree. The current Energy Programme Decree aims for 20 GW of PV capacity by 2023, rising to 35-44 GW

What is France's necp?

France's NECP in force incorporates self-consumption and energy communities as measures, setting a target of 200,000 PV sites for self-consumption in 2023, 1. 50,000 of which are collective. The current PPE, published in 2020, targets 3 GW to 5 GW per year of new capacity, to reach 20 GW by 2023 and 35 GW to 44 GW by 2028.
