Does El Salvador have a capacity to conduct renewable projects?

El Salvador has the national, political will to conduct renewable projects, as evidenced by the numerous incentives provided, the dire climate risks in the country, and their regional partnerships. While the institutional capacity is still catching up, to say they don't have any capacity would be false.

How much electricity does El Salvador produce?

Most of the country's installed solar panels are in government buildings, schools, manufacturing plants, and universities.

What should a company look for in El Salvador?

Companies should consider the specific industry in which they operate and evaluate the unique opportunities and challenges in the Salvadoran market. For example, El Salvador's textile and apparel industry is one of the most important, with a long-standing tradition of production and export to North America.

Is El Salvador losing electricity?

On the topic of electricity, World Bank last collected El Salvador's transmission loss in 2011 at 11%, which has shown a steady decrease over the past several decades, indicating greater infrastructure and procedural efficiency.
