

# **French mobile energy storage battery project**

## Overview

---

TAGENERGY, a global leader in low-carbon energy solutions, launches construction of France's largest battery energy storage platform (France, Marne). This landmark project marks the start of an ambitious expansion plan for 2025, with accelerated solar and storage development activities. What is France's largest battery energy storage system (BESS)?

Leading battery storage developer Harmony Energy is set to deliver France's largest battery energy storage system (BESS)—the Cheviré battery project – using Tesla Megapack technology. The project will mark a significant milestone for the French energy system, being France's first large-scale 2-hour battery.

Will Tesla build France's biggest battery energy storage system?

Lisbon-headquartered renewable energy company TagEnergy has launched construction of France's biggest battery energy storage system (BESS). Tesla will contribute to the project also, offering market access services and its expertise in advanced storage solutions.

Will a battery energy storage system lift France's existing fleet?

French storage developer Acacia has formed a joint platform with Eren Industries to roll out more than 500 MW of stand-alone battery energy storage systems (BESS) across France—a capacity that would lift the country's existing large-scale fleet by roughly half.

What does Harmony Energy do for France?

Harmony Energy CEO for France Andy Symonds said: “Developing and operating vital battery energy storage facilities across France, will lead to enhanced energy security, more affordable energy bills, and the decarbonisation of the grid. We are excited to commence building works on our first project.”.

How will the French energy grid balancing project work?

The project will provide critical balancing services to the French electricity grid network and enable the replacement of fossil fuels with renewable energy.
