

Global inverter prices

Overview

How much does an inverter cost?

This type is cost-effective and easy to set up, especially in areas with consistent sunlight. With prices ranging from \$0.10 to \$0.30 per watt, a typical system for a home with a 3 kW to 10 kW inverter will cost between \$300 and \$3,000.

Why are solar inverter prices falling?

Inverter prices dropped across the board. These trends highlight diverging pressures in the solar supply chain – modules are tightening in supply and climbing in cost, while inverters remain available, fuelling a buyer-friendly market. “The recent price increases reflect dwindling stock across the EU.

Will solar inverter prices fluctuate in 2025?

With increasing production, the global solar inverter prices are expected to be more competitive. However, supply chain disruptions and material costs may impact affordability. Factors like silicon shortages, shipping delays, and tariffs on electronic components could lead to fluctuating prices throughout 2025. 3. Type of Inverter.

How much does a microinverter cost?

While they cost more than string inverters, averaging \$1.15 per watt, they offer the benefit of independent panel optimization. For a 5 kW system, the cost is approximately \$5,750. Microinverters generally come with warranties of around 25 years, which aligns with the expected lifespan of the solar panels themselves.

When are solar module and inverter prices updated?

Solar Module Retailer Prices are updated on Monday. Solar System and Inverter Retailer Prices are updated on Friday.

How will the global inverter market perform in 2025?

Following a challenging 2024, the global inverter market is expected to return to revenue growth, with total revenue estimated to reach just under \$20 billion in 2025.
