

# **Haiti Energy Storage Photovoltaic Power Generation Project**

## Overview

---

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels. The government is exploring various avenues to lower.

EDH's inability to provide reliable, centrally-supplied power continues to drive demand for power equipment, such as new electrical power systems, generators.

Haiti's relatively underdeveloped electricity grid means it can integrate renewable energy into its energy supply. According to the World Watch Institute study in 2014.

Further, the original project and its additional financing will support the construction of 5 to 12 Megawatts of renewable energy capacity, through solar photovoltaic panels and batteries storage, which is expected to hybridize at least two isolated grids currently running on diesel power and provide additional solar photovoltaic and battery storage systems and operation and maintenance to priority hospitals.

## Haiti Energy Storage Photovoltaic Power Generation Project
