

Home Solar On-site Energy

Overview

Why should you buy a solar system?

Generate your own clean energy from the sun for free with solar. Add Powerwall to store your energy for use anytime you need it. Tax incentives and flexible financing options ensure you get the best price for your solar system. Power your home with emissions-free, renewable energy directly from the sun.

Can you buy a solar energy system with a mortgage?

New homeowners can add solar as part of their mortgage with loans available through the Federal Housing Administration , which allow borrowers to include financing for home improvements in the home's purchase price. Buying a solar energy system makes you eligible for the Solar Investment Tax Credit, or ITC.

Why should you choose solar panels for your home?

Solar panels for home use increase energy independence and lower long-term electricity costs with the help of sunlight, additional hardware, and certified professionals. When considering solar panels for your home, finding the right system design and installer is essential to maximize your savings and investment in renewable power.

How much do solar panels cost?

found that solar panels are viewed as upgrades, just like a renovated kitchen or a finished basement, and home buyers across the country have been willing to pay a premium of about \$15,000 for a home with an average-sized solar array. Additionally, there is evidence homes with solar panels sell faster than those without.

How much does a home solar installation cost?

However, home solar installations without battery storage typically cost

upwards of \$15,000, so homeowners often choose to finance their project or explore other buying options. There are many ways to finance the costs of solar, and professional installers often offer multiple solar financing options with certified lending partners.

Can solar power be used at home?

To bridge that gap, an inverter converts DC into AC so your solar power is usable at home. Storage comes next. Batteries allow homeowners to store excess energy for use at night or during outages or simply when there is intermittent sunshine, and can be sized based on current and future consumption.
