

# **How many photovoltaic energy storage projects are there in Mauritania**

## Overview

---

What energy projects has Mauritania received?

Mauritania has received finance for solar power generation, rural electrification and transnational electricity interconnection projects. Mauritania has received the finance to implement two energy projects that encompass solar power generation, transnational electricity interconnection and rural electrification.

Are there integrated photovoltaics in Mauritius?

According to MARENA, there are currently no building integrated photovoltaics in Mauritius. Energy efficiency is now one of the main criteria in the design of public buildings and in rental of private buildings. The Green Building Council Mauritius was set up in 2009 to promote green building and is a member of World Green Building Council.

Can Mauritania improve the sustainability of mining operations?

The report noted that expanding renewable generation capacity in Mauritania could improve the sustainability of mining operations, which currently represent close to a quarter of the country's GDP. "These operations are energy-intensive, and mines currently rely predominantly on fossil fuels for their electricity supply.

What is a solar power project?

The programme will develop solar power plants and establish a 1,373-kilometer high-voltage power line, with a transit capacity of 600MW between the two countries. The medium- and long-term objectives are to boost solar energy production and provide universal access to electricity in both countries.

Can Africa guarantee access to electricity by 2030?

"Within this framework, the government has drawn up ambitious programmes

seeking to guarantee access to electricity for all citizens by 2030, and this requires the optimal exploitation of the energy sources available in the country, to which this financing from the African Development Bank will contribute.”
