

Latvian crystalline silicon photovoltaic module prices

Overview

What is the price trend for polycrystalline modules?

We are already seeing rises of 0.5 to 1.5 euro cents per watt for polycrystalline modules. While monocrystalline modules (high-efficiency and all-black) are still broadly stable on the spot market, the price trend for polycrystalline modules is increasing.

How efficient are photovoltaic modules in 2025?

But let's take a closer look at the figures recorded in January 2025: Photovoltaic modules with monocrystalline or bifacial HJT cells, N-type/TOPCon or xBC (Back Contact) and their combinations, with efficiencies above 22.5%.

What is the current trend for crystalline module prices?

The trend for crystalline module prices appears to be shifting slightly upward. As already expected, the prices for crystalline modules from every region of origin have hardly changed over the turn of the year. Inexpensive remaining shares have been almost completely swept from the market.

Latvian crystalline silicon photovoltaic module prices

Photovoltaic Price Index

Notes on reading the PV price index Only tax-free prices for photovoltaic modules are shown. The prices stated reflect the average offer prices in retail and on the European spot market ...
