

# **Local installation price of photovoltaic panels**

## Overview

---

On average, installing solar panels costs \$18,604 for a 6-kilowatt (kW) system before incentives and tax credits. The price range typically falls between \$20,548 and \$30,666, depending on various factors such as location, system size, and the type of panels used. How much does solar panel installation cost?

On the high end, solar panel installation can cost over \$40,000. On the low end, it only costs a few thousand. It all depends. Additionally, none of these prices account for incentives like the federal investment tax credit (ITC), which can make your solar system up to 30% more affordable.

How much does a solar load controller cost?

A solar load controller monitors and manages your energy loads and costs around \$150 to \$500. These controllers often come with an app to help you track your energy usage. You could see an increase in your homeowners insurance if you install solar panels, as several studies have shown that solar panels can increase home values.

Are solar panels a worthwhile investment?

Yes, solar panels can be a worthwhile investment for many homeowners. Here are a few reasons why: Cost Savings: Most homeowners recover the cost of their solar panels in electric bill savings in about 8.5 years, with an estimated savings of \$25,260 over the system's lifetime.

Should you lease or buy solar panels?

If you're wondering if you should lease or buy solar panels, the most economically advantageous option is to buy them. Paying in full is a great way to pay off your system because you won't incur interest fees, but taking out a loan is the next best and most common option due to the high costs of solar panels.

Can solar panels be installed on a roof?

Home solar panels are generally installed on rooftops, so the system's design largely depends on the roof's characteristics. Complex roofs with multiple faces, dormers, vents, or skylights can increase installation and design labor costs, but they may also limit the number of panels you can install.

Should you install solar panels on your home?

If you live in a sunny state, each solar panel you install on your home will operate more efficiently and produce more electricity daily. If you live in a less sunny state, you'll need more solar panels to produce the same amount of electricity, so your system will be more expensive.
