

Norway safe energy storage power supply service

Overview

Does Norway have energy security?

Norway is not dependent on the import of any energy source and, hence, energy security in Norway does not relate to security of supply but rather broader energy security: the operation of hydropower plants and the potential disruptions they may face, either from hybrid attacks or weather events.

Does Norway have a good power system?

Norway has a sound power balance and high power trading capacity, and therefore enjoys high energy security in the power system. Nevertheless, low water inflow and events outside Norway can make the situation difficult at times. Statnett is responsible for developing measures to deal with highly strained power situations energy situations.

Does Norway have a security of supply?

Security of supply was very rarely discussed by the interviewed experts in Norway prior to 2022. When it was mentioned, it was mainly in the context of electricity (as opposed to the defence sector security of supply, which pertained to oil and petroleum products).

Does Norway have an energy security nexus?

Prior to 2022, Norway had barely considered the energy-security nexus due to substantial domestic energy supplies. Some interconnections were, however, visible via three cases: the economic security provided by oil and gas exports, security of hydropower infrastructure, and internal tensions around wind power.

How vulnerable is Norway's energy system to unexpected events?

'A review of the energy situation in 2021-2022 concluded that the Norwegian electricity system has become more vulnerable to unexpected events. The legislative amendments we are drafting will clarify the responsibilities of

hydropower producers to safeguard security of supply.

Does Norway need statutory responsibilities for hydropower producers?

This content is more than 1 year old. The Norwegian Government is introducing a control mechanism including statutory responsibilities for hydropower producers to safeguard security of electricity supply. 'We need to make sure that Norway has enough power. This means safeguarding our own security of supply.'
