

PV inverter unit price

Overview

A solar inverter costs \$2,000 on average, with prices ranging from \$800 to \$5,000 —though the overall price is wrapped up in your solar panel installation. The size of your system, the type of inverter, and the efficiency rating affect your final cost. How much does a solar inverter cost?

The overall cost breakdown shows that while necessary, inverters are a relatively small part of the total investment in solar technology. After applying tax credits, the total cost to install a solar system, inverter included, comes to between \$10,600 and \$26,500. In 2023, there was a 15% drop in the price of residential systems.

How much does a string inverter cost?

String inverters cost \$800 to \$2,500 on average. Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power.

How do I choose the right solar inverter type?

There are two categories to consider when deciding on the right solar inverter type: the solar inverter technology, and the type of solar power system the inverter is for. String inverter: A string inverter is a single, standalone unit that converts power from a whole string (or strings) of solar panels.

What is a solar inverter?

A solar inverter is an essential part of a solar-panel system. The inverter turns the direct current (DC) electricity generated by solar panels into the alternating current (AC) electricity needed for most appliances and home electrical needs.

How efficient are solar PV inverters?

Modern solar PV inverters, especially those utilizing materials like silicon carbide (SiC) and gallium nitride (GaN), are achieving efficiency levels above 99%, thereby reducing energy losses and enhancing the overall energy output.

How much does a microinverter cost?

While they cost more than string inverters, averaging \$1.15 per watt, they offer the benefit of independent panel optimization. For a 5 kW system, the cost is approximately \$5,750. Microinverters generally come with warranties of around 25 years, which aligns with the expected lifespan of the solar panels themselves.
