

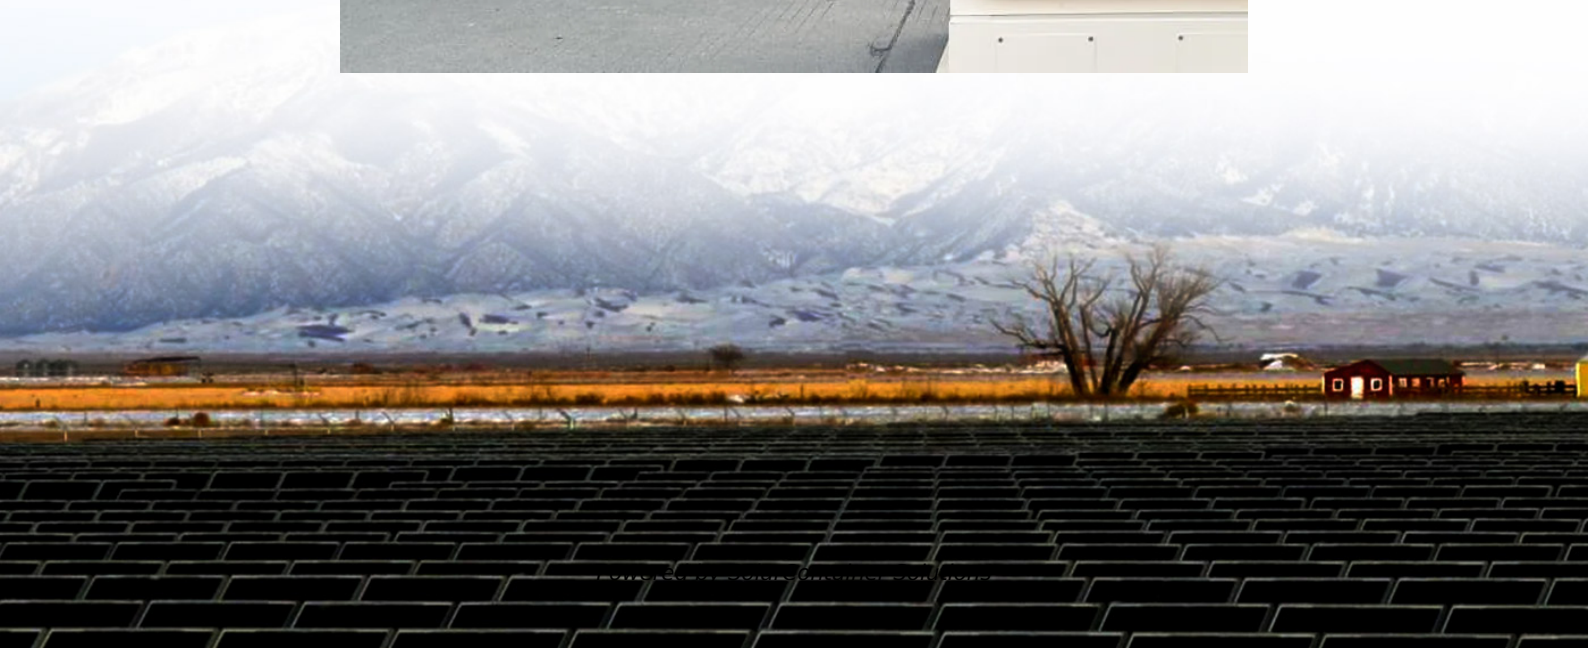

# Photovoltaic panels generate electricity and sell it

## Overview

---

Although many people with solar systems on their homes or businesses think that they can sell excess electricity to the power grid, the reality is that you can only sell power to the grid if you have an electric.

Can you sell excess electricity from solar panels?

Selling excess electricity generated by solar panels offers a valuable opportunity to reduce energy costs and generate additional income. By understanding net metering, feed-in tariffs, and other revenue streams like SRECs, you can maximize the financial benefits of your solar system.

What happens to the excess power produced by solar panels?

Net metering will automatically send the excess power a building produces to the grid, allowing the owner to save the energy they don't use and get it back from the utility when the panels don't make enough.

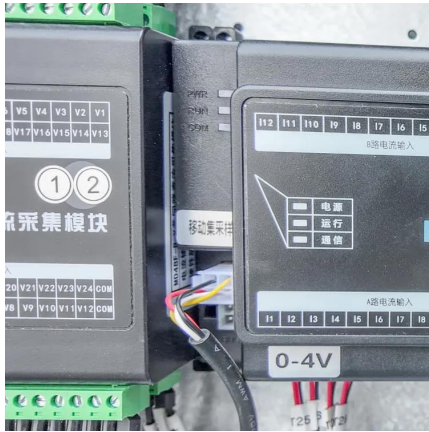

How much electricity does a solar panel produce?

According to Solar.com, a 400-watt (W) solar panel produces 1.8 kilowatt-hours (kWh) of electricity in a day, given that it receives around 4.5 hours of sun. The amount of electricity a solar panel system produces will vary depending on the location and sunlight hours received.
