

Portugal bifacial solar panels for sale

Overview

Who makes bifacial solar panels?

JA Solar, Jinko, Trina, Canadian Solar can be listed among most popular bifacial solar panels manufacturers. Solar experts see great potential in bifacial modules and expect them to become more and more popular, which means we can expect more and more brands to start making them.

How much power does a bifacial solar panel get?

Usually, it gives you up to 30% of the front side's production. For example, a 400 Watt bifacial solar panel gets a 130 Watt bonus if the conditions are good. Since the backside of the bifacial panel is made to work with diffused light, it performs well in low light conditions, such as cloudy weather, fall and winter days.

What is a bifacial solar panel?

A bifacial solar panel is a PV module with two active sides. Instead of a white or black back sheet on the rear side, it has another layer of glass that protects solar cells. It often doesn't have a frame. How do bifacial solar panels work?

The front side of a bifacial panel works just like any normal panel would do.

Which solar bifacial panels are cheapest?

The cheapest panels come from China. For example, Trina Solar bifacial panels are a solid choice: the company is known to be modern and innovative. Today this company competes in Top-5 world's solar brands and offers a diverse product line with relatively low prices. Another good choice would be LONGi Solar bifacial panels.

Are bifacial solar panels cost-effective?

When it's properly used, a bifacial panel proves to be cost-effective — for example, a 480W bifacial panel with 30% production bonus from the rear side

is going to produce more energy than two 300W panels. In these circumstances a bifacial solar panel price is going to be less than the price of two panels and it will also occupy less space.

Do bifacial solar panels work in low light?

For example, a 400 Watt bifacial solar panel gets a 130 Watt bonus if the conditions are good. Since the backside of the bifacial panel is made to work with diffused light, it performs well in low light conditions, such as cloudy weather, fall and winter days. How to install bifacial solar panels?
