

# **Solar photovoltaic panels are divided into tiled and**

## Overview

---

What is the difference between solar roof tiles and solar panels?

Solar roof tiles and solar panels serve different purposes. Solar panels are installed on a finished roof and add to the construction cost, while solar roof tiles are a part of the construction cost. When solar roof tiles were first introduced in 2011, they cost almost twice as much as solar panels. However, the price ratio has since decreased as the technology has advanced.

Should you replace roof tiles with solar panels?

If you've decided to replace your roof tiles with solar tiles, it will take much longer. Additionally, solar tiles are tapered to fit sloped roofs; you can attach solar panels to any type of roof as you can angle them to catch the sun. The semiconductors inside solar tiles and panels work better in cooler conditions.

How do solar panels and roof tiles convert sunlight into electricity?

Solar panels and solar roof tiles convert sunlight into electricity, which is one of the most common uses of solar energy. Their surfaces absorb light through photovoltaic (PV) cells onto a semiconducting material, like silicon, contained within. The sunlight reacts with this semiconducting material to create an electric field.

Are solar tiles better than solar panels?

Solar panels, while highly effective, are mounted above the roof, which can be less visually appealing for some homeowners. The decision between solar tiles and solar panels often comes down to three primary factors: efficiency, cost, and aesthetics. Below, we break down these differences to help guide your decision:.

How much power does a solar tile installation produce?

Each tile can only produce up to 63 watts of power. This adds up, depending on how many tiles you install. Most solar tile installations can reduce your

electricity bill by between 40% and 70%. Solar panels produce between 250 and 400 watts of power per panel.

How long do solar panels & tiles last?

Solar panels and solar tiles can last up to 30 years with only basic maintenance. That means your solar panels or tiles will likely outlive your roof. This can result in additional costs when you have to remove your solar panels to facilitate a roof replacement.
