

The difference between outdoor solar integrated machine focusing and flooding

Overview

How does a solar flood light controller work?

In addition, the solar flood light controller also has intelligent driving LED lights. For example, constant current drives LED lights to maintain the same brightness. Light control function-automatically turn on the LED lights at dark and turn off the LED lights at dawn.

How to control solar flood lights?

The solar flood lights that can be controlled via the remote controller by the user, they are generally used in household solar flood lights. In your house, people hope that the solar flood lights can be controlled by switches like the city circuit lights.

How a solar motion sensor flood light works?

According to the performance of the lamps, it can be divided into solar motion sensor flood light and constant bright solar light. The solar motion sensor flood light will maintain full brightness only when it detect the human motion, which saves a lot energy, but it is not suitable for some areas that need high brightness light.

What are the different types of solar flood lights?

There are different kinds of solar flood lights, such as solar wall motion sensor light, all in one solar flood light, split solar flood light, PIR motion sensor solar flood light. According to the different structural design, solar flood lights are divided into integrated solar flood lights and split solar flood lights.

What is solar flood light?

Solar flood light is a set of independent solar system, which is composed of LED light source, solar photovoltaic panel, battery, solar controller, structural support, etc. Solar photovoltaic panels are the core part of solar floodlights and the most valuable part of solar floodlights.

What are the advantages of solar flood light?

Solar power has unparalleled advantages, clean, pollution-free, very safe, and solar energy is more extensive and sufficient than other energy sources. Solar flood light uses sunlight as energy source. During the day, solar panels charge the battery, and at night, the battery powers the light source.
