

The price of bifacial photovoltaic panels

Overview

Individual 550W bifacial panels cost \$0.40-0.50 per watt, with complete residential systems ranging from \$3.00-4.00 per watt installed. A typical 10kW residential system costs around \$35,000 before incentives. Are bifacial solar panels worth it?

Yes, bifacial solar panels can be worth it — but it depends on your intended use. The technology doesn't make sense for residential rooftop projects, but the increased efficiency makes them worth the higher upfront cost for commercial solar projects and utility solar developers.

What factors affect the price of bifacial solar panels?

Some factors that can influence the price of bifacial solar panels include:
Manufacturer Reputation: Panels from reputable Solar Panel Manufacturers may come at a premium but often come with better warranties and performance guarantees.

What is the difference between monofacial and bifacial solar panels?

In most cases, monofacial solar panels come with a frame and a backsheet made of polymers used to protect and isolate the electrical circuitry of the solar panel. Bifacial solar panels unique transparent design of photovoltaic (PV) panels can also absorb reflected sunlight off of the ground, water or other materials.

How much power does a bifacial solar panel get?

Usually, it gives you up to 30% of the front side's production. For example, a 400 Watt bifacial solar panel gets a 130 Watt bonus if the conditions are good. Since the backside of the bifacial panel is made to work with diffused light, it performs well in low light conditions, such as cloudy weather, fall and winter days.

What are the different types of bifacial solar panels used in India?

Here are three major types of bifacial solar panels commonly used in India:
Glass-Glass Bifacial Panels: These panels feature double-sided glass surfaces, offering exceptional structural strength and resistance to heavy loads. They are known for their durability and longevity.

Do bifacial solar panels work in low light?

For example, a 400 Watt bifacial solar panel gets a 130 Watt bonus if the conditions are good. Since the backside of the bifacial panel is made to work with diffused light, it performs well in low light conditions, such as cloudy weather, fall and winter days. How to install bifacial solar panels?
