

USA inverter single 6kw quotation

Overview

Is a 6 kW inverter worth it?

The combination of these two things means that it's probably not worth your while having a system at 6 kW. A 5 kW inverter will be the most cost effective. And the extra 1 kW of panels means that you'll get best use out of your inverter - it will spend more time running at its peak output.

How much power does a 6kW string inverter generate?

This 6kW string inverter kit requires up to 345 square feet of space and generate 400 to 1,000 kilowatt hours (kWh) of alternating current (AC) power per month. Not bad when you consider that the average American household averages 920kWh per month! Actual power generated will vary based on location, equipment and installation factors.

Are genetry solar inverters white-labeled?

Genetry Solar inverters are completely designed in-house by Genetry Solar in the U.S.A.; they are not “white-labeled” (rebranded) products designed by a different company. This means that we are able to provide literally unparalleled technical support, not to mention providing features not found anywhere else in the low-frequency inverter market.

What is a genetry solar inverter?

Genetry Solar inverters are designed to meet the varied needs of the off-grid customer who knows exactly how they want their system to work. There are literally hundreds of settings, allowing complete control over the inverter's behavior. Many features are actually the result of customer requests!.

Do genetry solar inverters have AC input switching?

Contact us for more details! Yet another industry-first available on Genetry Solar inverters is the automatic AC Input switching function. This is a highly valuable feature for RV customers who may go from a 240v shore connection

one day to Grandma's 120v extension cord the next day!.

Can genetry solar inverters be updated via WiFi?

Genetry Solar inverters can be updated via WiFi, both via normal Internet connection, or via direct upload. The Direct Upload update feature also allows you to update inverters remotely deployed in areas with no Internet connection.
