

What are the EU hydrogen energy base stations

Overview

What is the hydrogen infrastructure map?

The updated (May 2024) Hydrogen Infrastructure Map is now available online show mapping how the European infrastructure evolves across countries and sectors for hydrogen distribution, transmission, import terminals, storage, demand and production towards 2030, 2040 and 2050. Our H2 Storage projects “HyStorage” and “H2 Krummhörn” are par.

What is the European hydrogen backbone?

The European Hydrogen Backbone creates an opportunity to accelerate decarbonisation of the energy sector by efficiently integrating substantial volumes of additional renewable and low-carbon energy into the system and by connecting regions with abundant supply potential with centres of demand.

When will the hydrogen infrastructure map be available online?

May 30, 2024 The updated Hydrogen Infrastructure Map is now available online. Discover how the European infrastructure evolves across countries and sectors for hydrogen distribution, transmission, import terminals, storage, demand and production towards 2030, 2040 and 2050.

How often should the hydrogen infrastructure map be updated?

The involved associations are committed to facilitating updates to the Hydrogen Infrastructure Map twice a year, to ensure that it is a ‘living’ map comprising the most up-to-date status of the hydrogen projects network. The next update is planned for Q4 2024.

Does EU policy address limited green hydrogen resources?

At present, European Union (EU) policy is not targeted enough to ensure that limited green hydrogen resources are used effectively. For the first time, Global Energy Monitor (GEM) offers one of the most comprehensive overviews

of the intersection between the proposed hydrogen network and existing European gas infrastructure.

Are Europe's Hydrogen plans based on a methane gas network?

The elements of Europe's hydrogen plans that build on its methane gas network appear, at best, out of touch with the science and economics of hydrogen, and, at worst, like an attempt by the oil and gas industry to extend the lifetime of Europe's dependency on gas.
