

# **Which is bigger for a base station battery or an outdoor one**

## Overview

---

Which battery is best for a power station?

While you can build a cheaper backup solution using lead-acid batteries or buy a power station featuring them, it's usually better to go for a power station with lithium-ion (Li-ion) or lithium iron phosphate (LFP) batteries.

How to choose a portable power station?

The next step is to consider the capacity of the portable power station. The capacity of the power station will determine how long it can run your devices. Capacity is measured in watt-hours (Wh) and indicates how much electricity the portable power station can store.

Why is battery capacity important when buying a power station?

Battery capacity is the most crucial consideration while shopping for a power station because it directly governs how long the connected devices will run on a single charge. Power stations typically mention the battery capacity in watt-hours (Wh), which, simply put, is the number of watts the battery could produce in an hour.

What is the best portable power station for camping?

Recommended Product: Jackery 300 Plus Portable Power Station Ideal for charging: Good for: Camping/weekend getaways and home emergency power supply (EPS). Recommended Product: EcoFlow DELTA 2 Portable Power Station Ideal for charging: Good for: Extended camping trips (3+ days) or short-term home power outages.

How much power does a power station need?

A power station needs to be able to offer enough sustained output (3000W) to keep the AC unit running but must also have the capacity to hit the peak energy requirement (4500W) when the unit is first activated.

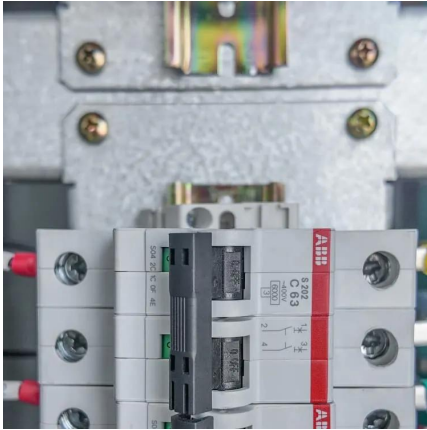

How many watts a battery can a power station produce?

Power stations typically mention the battery capacity in watt-hours (Wh), which, simply put, is the number of watts the battery could produce in an hour. So, for example, a 1000Wh battery could theoretically offer 1000Wh for an hour. However, that doesn't mean the power station can actually produce that much power.
